Main-sequence → Supergiant → Supernova → Pulsar

Stellar wind

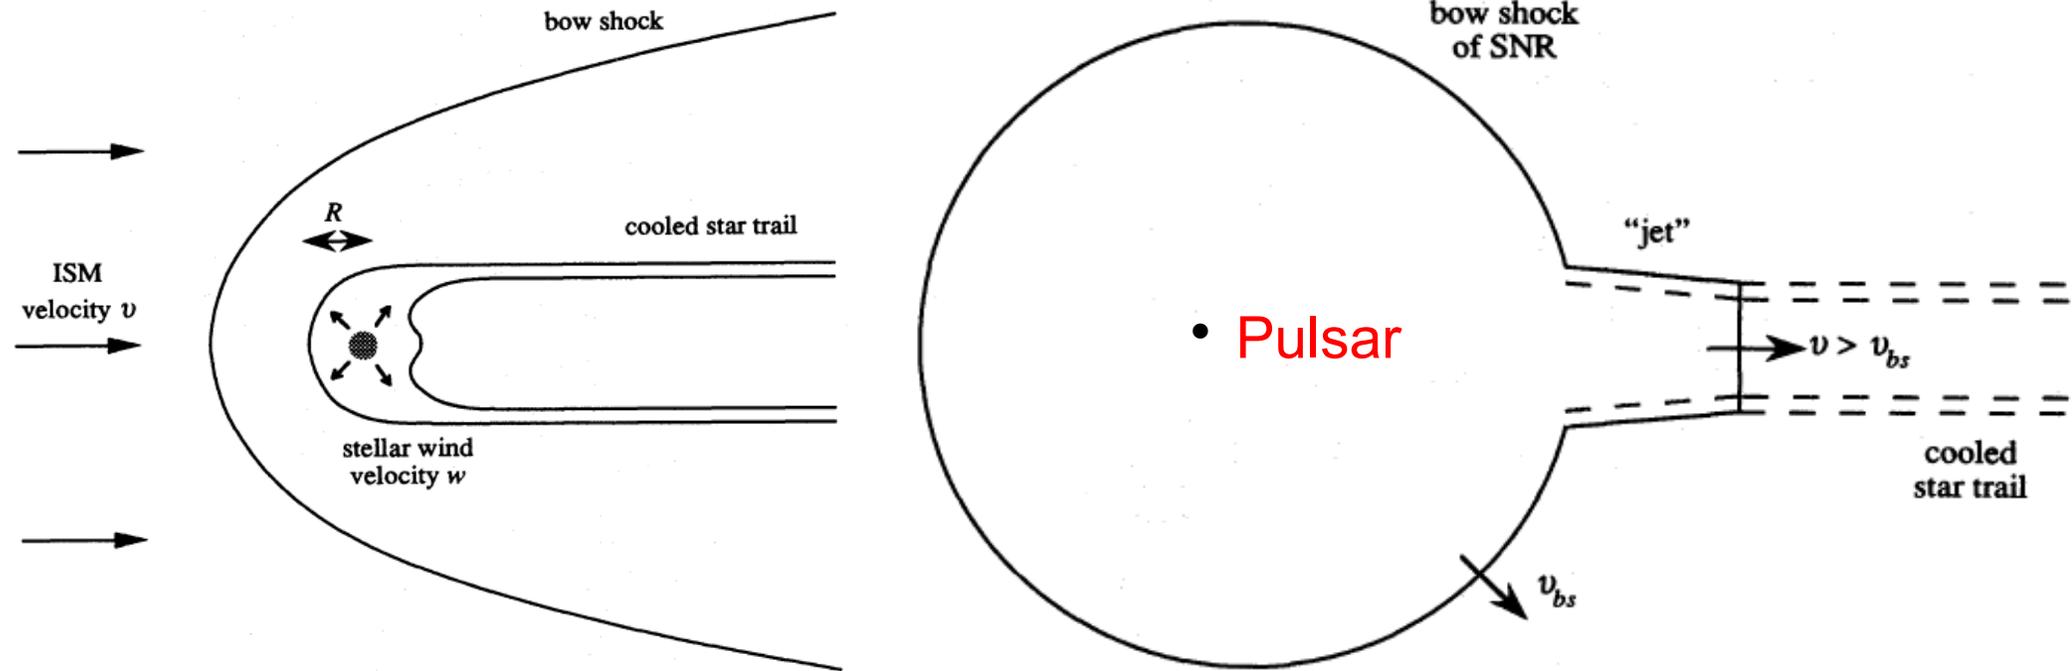

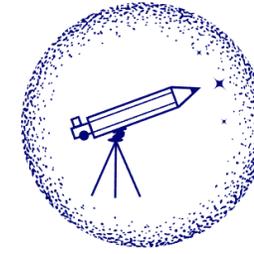

→ Ejecta → Leptons

So far neglected in pulsar wind litterature

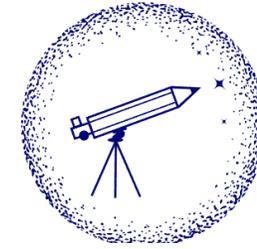

- Credits : NASA (Spitzer, Herschel, HST), ESO.

Runaway massive star die in their own bow shock

Cox et al. (1991)

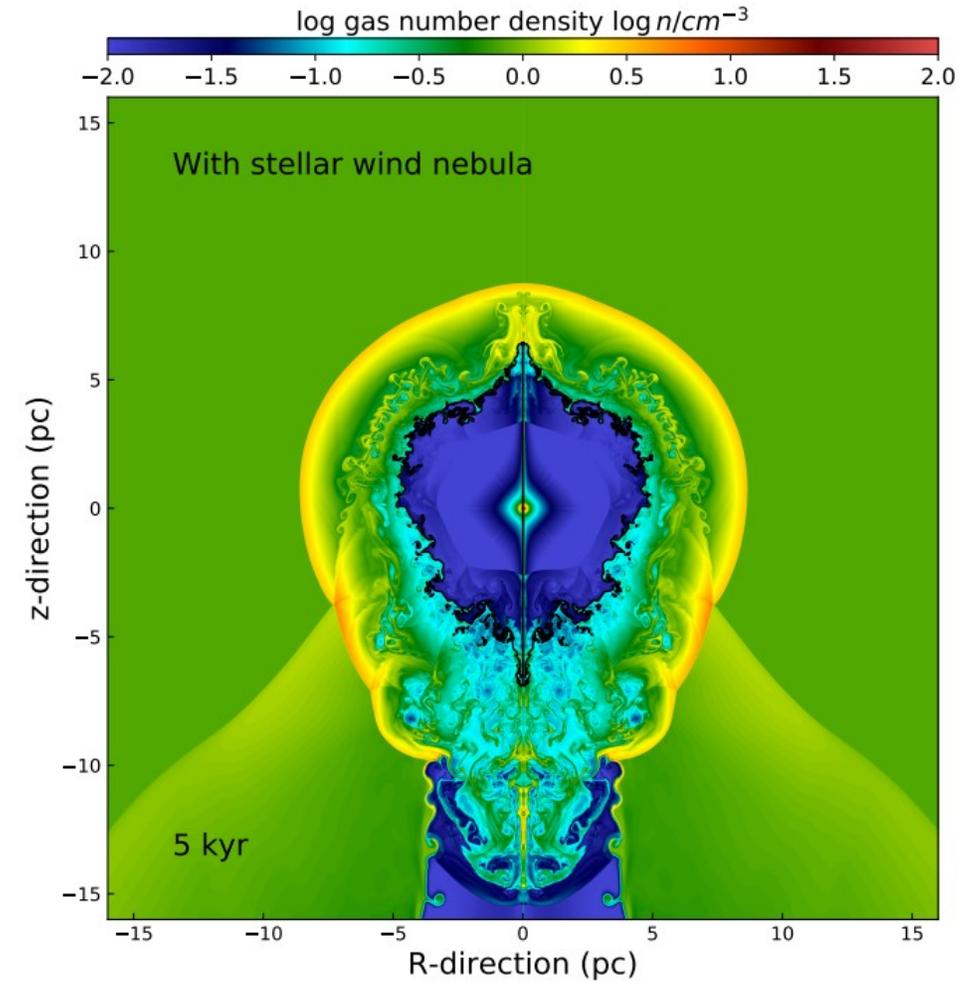

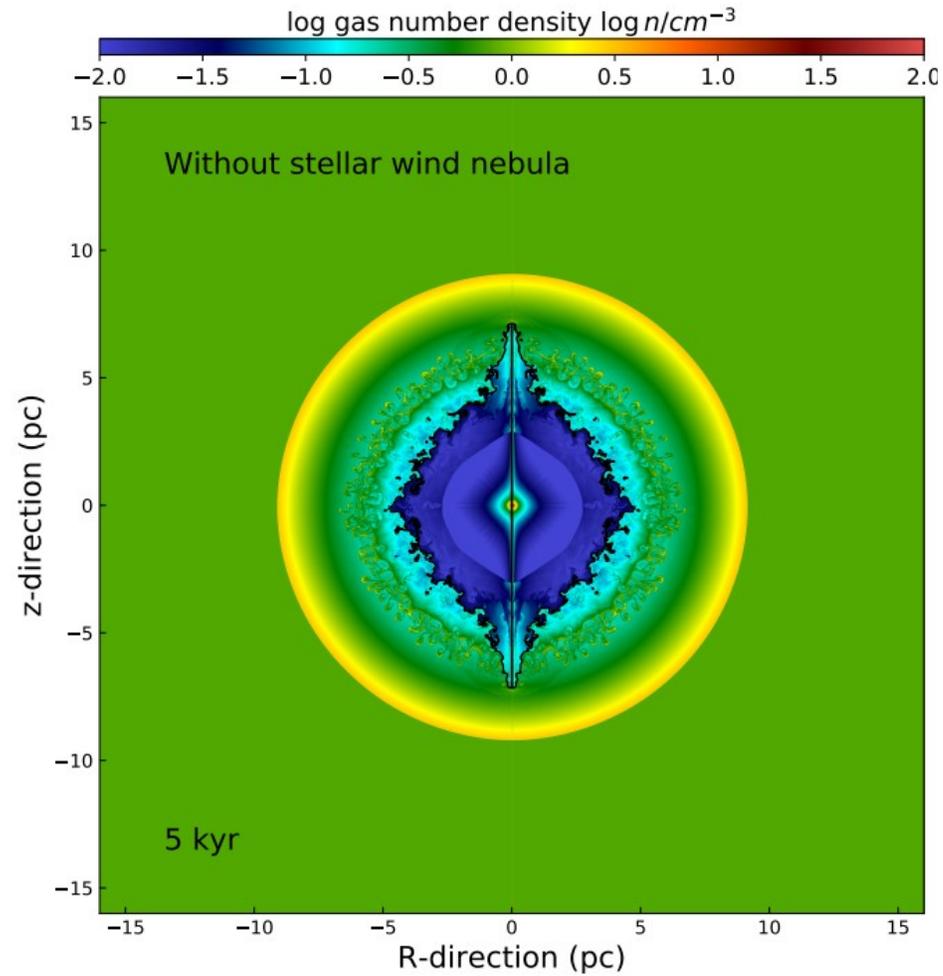

Asymmetric remnant with pulsar wind nebulae

Next: 3D MHD models with pulsar motion inside of the remnant

20 Mo progenitor moving with 40 km/s
Pulsar moving with 300 km/s along Ox

20 Mo progenitor moving with 40 km/s
Pulsar moving with 300 km/s along Ox

Take home message

The circumstellar medium of massive (runaway) star is a governing parameter in the morphology, distribution and mixing of materials in plerion.
